If you have recently switched to an iPhone or find yourself unable to use these fun characters, you might be wondering **how to get emoji on iPhone**. The good news is that Apple has integrated the emoji keyboard deeply into iOS, making it incredibly easy to access once you know the simple steps. This comprehensive guide will walk you through every method, troubleshooting tip, and hidden trick to ensure you never miss out on the perfect emoji again.

Whether you are sending a quick text, composing an email, or posting on social media, emojis allow you to convey feelings that words alone sometimes cannot. From the classic laughing crying face to complex flag combinations and skin tone variations, the iPhone offers a vast library of characters. Understanding **how to get emoji on iPhone**is not just about adding a keyboard; it is about unlocking a richer, more engaging way to connect with friends, family, and colleagues.

Step-by-Step Guide to Enable the Emoji Keyboard

For many users, the emoji keyboard is already present by default. However, if you have customized your keyboard settings or are setting up a new device, you may need to add it manually. The process is straightforward and takes only a few seconds.

Checking Your Current Keyboard List

Before adding anything new, it helps to see what keyboards are currently active on your iPhone. To do this:

1. Open the Settings app on your home screen.
2. Scroll down and tap on General.
3. Select Keyboard and then tap Keyboards at the top of the screen.

Here, you will see a list of all the keyboards you have enabled. If you do not see an option that says "Emoji," you will need to add it.

Adding the Emoji Keyboard

If the Emoji keyboard is missing from your list, follow these simple steps for **how to get emoji on iPhone**:

1. Still in the Keyboards settings screen, tap Add New Keyboard.
2. Scroll through the list of available keyboards until you find Emoji.
3. Tap on Emoji to add it to your active keyboards.

Once added, you can rearrange the order of your keyboards by dragging the three-line icon on the right side of each keyboard. Placing Emoji near the top can make it faster to switch during typing.

How to Switch to the Emoji Keyboard While Typing

Now that you have enabled the keyboard, the next part of learning **how to get emoji on iPhone**involves actually using it during a conversation. The process is intuitive and works across almost all apps.

When you are typing in any text field, such as in Messages, Notes, or Mail, look at the bottom of your screen. You will see a small globe icon or an emoji smiley face icon next to the space bar. Tapping this icon instantly switches your keyboard to the Emoji keyboard. If you have multiple keyboards installed, tapping the globe icon repeatedly cycles through them until you land on Emoji.

Once the Emoji keyboard is active, you will see rows of colorful characters. You can scroll through the categories by swiping left or right. At the bottom of the keyboard, there is a row of icons that represent different categories such as frequently used, smileys and people, animals and nature, food and drink, activity, travel and places, objects, symbols, and flags. Tapping one of these icons jumps you directly to that section, saving you time when searching for a specific emoji.

Using the Search Feature for Emojis

One of the most powerful yet underutilized features is the emoji search function. If you have a specific emoji in mind but cannot find it by scrolling, simply type a keyword into the search bar at the top of the Emoji keyboard. For example, typing "happy" will show smiley faces, "pizza" will show the pizza slice, and "heart" will show various heart styles. This feature makes **how to get emoji on iPhone** even faster and more efficient.

Using Emoji Predictions and Replacements

Apple has integrated emoji suggestions directly into the QuickType predictive text bar. As you type a word, the predictive bar above the keyboard may suggest an emoji that matches the word. For instance, if you type "love," a heart emoji might appear as a suggestion. Tapping that suggestion replaces the word with the emoji.

This feature works seamlessly once you understand **how to get emoji on iPhone** through predictive text. To enable this, make sure that **Predictive** is turned on in your keyboard settings. Go to **Settings > General > Keyboard** and toggle on **Predictive**. Now, whenever you type a word that has a common emoji equivalent, the suggestion will appear automatically, allowing you to add emojis without even opening the emoji keyboard.

Customizing Your Emoji Experience

Once you have mastered the basics of **how to get emoji on iPhone**, you can further personalize your experience with skin tones, gender variations, and multi-person emojis.

Changing Skin Tones and Hair Styles

Many human emojis come with customizable skin tones. To change the skin tone of an emoji, tap and hold on the emoji until a small menu pops up showing different skin tone variations. Slide your finger to the desired tone and release. Your iPhone will remember your selection for future use, so you do not have to change it every time.

In recent iOS versions, Apple has also added hair style options for certain emojis, such as the person with red hair or curly hair. The same tap-and-hold gesture applies here, giving you even more ways to express yourself.

Using Multi-Person Emojis

Group emojis, such as two people holding hands or a family, can be customized by gender and skin tone. Tap and hold on the group emoji to access a grid of combinations. You can individually select the skin tone and gender for each person in the emoji, making it uniquely yours. This level of detail shows how much thought

Emojis Showing as Blank Boxes or Squares
